

Session Notes 2026-09-05 — Cash + gold dashboard, Budget fed by every account (phase 2c)

Shift Hub · Accounting · D:\vscode\todo · follows the two 2026-09-05 notes on cash accounts and worker ledgers

Built

- **/accounting/dashboard** (tile on the Accounting chooser): cards for cash, bank, gold, silver, total and the ? review count; every account with owner, balance, counted lines and last date; gold & silver per metal and owner with ounces, paid, average cost, an editable price per ounce, value and gain.
- Server: GET /api/accounting/balances sums each account server-side (statement balance for Whish, opening-pinned sum for the rest). GET/PATCH /api/accounting/gold holds holdings + prices in Firestore settings/gold; POST /api/accounting/gold/import reads 20250422 *gold+silver.xlsx* (laptop only): 14 purchases, gold 4,000 \$/oz and silver 58.5 \$/oz taken from the sheet's market cells. Kilograms → 32.1507 troy oz.
- **Budget now sees every account.** budget.js streams the lines of all Accounts-page accounts (Mario cash, Neo, the five workers) next to the Whish statement, each with a running balance. In Budget → Settings each hub account can be mapped to a Budget account; its lines and balance then come from the hub. Unmapped accounts are simply not shown (nothing changes until you map one).

Numbers tonight

Block	USD	Note
Cash (6 accounts)	7,787.77	Mario 9,886.21 (opening still to confirm) + workers -2,098.44
Bank (3)	-17,789.41	Neo Mario -14,475 and Neo Therese -6,000 have only their Odoo payments, no opening and no statement yet → not real balances. Whish 2,685.59 is real.
Gold 33.71 oz	134,840	Mario 20.05 oz, Therese 12.66 oz, Ahmad Samrout 1 oz — matches the sheet's 134,765
Silver 225 oz	13,165	includes Youssef's 2 kg (3,762); the sheet's own total leaves him out
Total	138,004	drops to ~158k once Neo gets real openings

Next

- Neo Mario / Neo Therese: set an opening row or import the Neo statement so the bank block is true.
- Confirm Mario cash 9,886.21 by counting the wallet; update gold/silver prices from the dashboard when they move.
- Phase 2b Telegram capture per person is the remaining item of the spec.

Files

- dashboard.html (new), accounts.js (balances + gold routes), ledgers.js (readGold), budget.js / budget.html (hub accounts in Budget), server.js (route), accounting-home.html (tile)
