

Session Notes — 12 September 2026

Shift Hub · Site chat (part 1), Day report changes, Projects dashboard design · D:\vscode\todo

Decisions

- **Nothing is booked without Mario's approval.** Every line read from WhatsApp or posted on /site is a *suggestion* (dimmed, out of totals) until ✓ on the Day report, the Accounts grid or Statements.
- Day report columns renamed: **Paid by Shift** (money he received) / **Due to employee** (what he is owed). Storage unchanged.
- Replace the WhatsApp groups with a hub conversation (/site): worker threads + a General thread for Mario; Mario's voice via the Wispr Flow keyboard; web PWA, not a native app; pilot worker Khodr.
- Attendance (Start/Finish with GPS, site pins → project, day line written by itself as a suggestion) = part 2.
- Partner (Antoine) may read the Day report filtered to his projects, amounts shown, suggestions hidden — prepared, switched off.
- Projects dashboard: active = any analytic line in the last 12 months, period picker to see anything; sub-plans folded (Ajaltoun ▶ villas); all amounts in USD.

Built today (part 1) — deployed to hub.shift-group.co by a parallel session

Piece	Where
Who autocomplete, renamed columns, WhatsApp/Site suggestions with ✓/✗ and "not counted", progress-photo strip, read-only partner mode	daily.html, accounts.js, daily-access.js (+ tests)
App flags <code>daily</code> and <code>site</code> ; members table columns Daily · Site · Ledger · Projects; Site + Day report tiles	server.js, hub.html, admin-shared.js
/site page: threads, text/photo/video/voice, awaited <code>POST .../digest</code> , retry, flip receipt↔progress, line state on the post	site.html, site.js, site-parse.js, hub-files.js
Site lines treated like WhatsApp lines in every gate (edit, delete, accept, pending, booking)	accounts.js, ledger-bills.js, statements.js, accounting.html
Spec + plan + progress ledger	docs/superpowers/specs/2026-09-12-site-chat-attendance-design.md · plans/2026-09-12-site-chat-part1(.progress).md

Guards from review: mime whitelist + nosniff on served files; a worker reaches only his own thread; 4 MB client cap (Vercel body limit) — videos deferred; e2e script `e2e/site.mjs` posts a real line and removes it (local hub only).

Pending — Mario

- Firebase console → Storage → Get started (files capped at 700 KB until then).
- Vercel → todo project → function timeout ≥ 60 s (photo read + Odoo lookups).
- Members table: tick **Site** + ledger `khodr-cash` for Khodr when the pilot starts; tick **Daily** + projects `69,59,60,61,62,63,64` for Antoine when he may look.
- Approve the Projects dashboard design (above) to start building it.

Pending — next sessions

- Projects dashboard: `/accounting/projects` , one Odoo pull cached 10 min, filters (period · company · active/all · search), folded sub-plans, per-company columns, drill-down to lines.
- Site chat part 2: Start/Finish + location, site pins, self-written day line (suggestion), Ziad hours rule, direct-to-Storage upload for videos, dedup against the nightly WhatsApp read, then retire Khodr's chat.
