

Hub ♦ Ask v2 and the dev queue

Session notes · Wednesday 7 October 2026 · Shift Hub (hub.shift-group.co)

Facts

- The ♦ Ask button has been on every hub page since 26 Sep 2026. It runs Claude Sonnet 5 on the server, and the key stays on Vercel.
- Workers and partners keep the read-only tools: ledgers, balances and line search, limited to their own ledger.
- Mario also gets: Odoo name lookup, propose a new line, fill the blanks of a waiting line, and queue a code change.
- Every write is a proposal. It waits for Mario's ✓ on the grid. Accepted or booked lines are refused. Nothing is booked in Odoo or sent from the chat.
- The assistant reads SHIFT.md (the bundled copy is `shift-context.md`) and whatever is open on the page: on the site chat, the chat and the day.
- Tested on Ziad's 19 USD line (7 Oct, phone recharge for Elias): it found the line, filled in the note and company, and left it waiting for the ✓.

Decisions (Mario)

Question	Answer
Who may use the assistant for dev requests	Mario only
May the chat draft hub proposals (lines)	Yes, but always behind the ✓
Split of work	Hub Ask = questions and proposals, never code. Claude Code in VS Code = the only thing that edits and deploys.

How the dev queue works

- When a request needs code, the assistant writes a brief and saves it at **/dev**. On that page Mario can edit, mark done, drop, or "Copy prompt" (all open requests in one brief).
- On the laptop: in VS Code, say `/hub-dev-queue`. Claude Code runs `node dev-queue.mjs`, does each request, verifies, deploys, and then runs `--done <id> --commit <hash>`.

Next actions

- Try it from the phone: ask ♦ for a balance, dictate a money line, ask for a small hub change, then check /dev.
- The WhatsApp archive viewer (the laptop app) has no ♦ button yet. If you want one there, file it as a dev request.
- When SHIFT.md changes, refresh the bundled copy before the next deploy (the skill does this).
