

Session Notes — Accounting hub: Odoo tile & Budget ledger

4 September 2026 · Shift Hub / To-Do app (`D:\vscode\todo`) · hub.shift-group.co

What was done

- **Odoo tile added to /accounting.** The Accounting chooser (Whish, Wise, Budget) now has a fourth tile —  **Odoo**, "The books themselves. Bills, payments, journals and reports in Odoo." — linking straight to `https://shift2.odoo.com`. Decision taken this session: a plain shortcut to Odoo, *not* a new in-hub page built on the JSON-RPC connector.
- The tile renderer in `accounting-home.html` gained an `ext: true` flag, which adds `target="_blank" rel="noopener"`. Internal tiles still open in the same tab. No server route or allowlist change was needed.
- **Budget work already in the working tree was committed and shipped** (it had been left uncommitted from an earlier session): `+ expense` / `+ income` links inside an account ledger (desktop footer and mobile toolbar), new entries defaulting to the account being viewed, mobile search keeping the caret while typing, and the desktop phone preview centring correctly with the notes floating beside it.

Commits (all on `main`, pushed)

COMMIT	SUBJECT
<code>38afb67</code>	Accounting: an Odoo tile that opens the books themselves
<code>50858fe</code>	Budget: add entries from inside an account, and keep the search caret
<code>163560c</code>	Budget phone preview: always fits the window, plus a landscape view (authored from a parallel session, same day)

Deploy — the lesson of the session

Pushing to GitHub does not publish. After the budget commit was pushed, production still served the old bundle 12+ minutes later. It only went live after running `vercel --prod --yes` from `D:\vscode\todo` (deployment `todo-hh32u402f`). This confirms the existing note that the Vercel GitHub App has no repo access, so **every change needs the manual CLI deploy**.

- Serving path: Vercel project **todo-app** (team `shift14`), a Vercel *Service* running `server.js` via the `/(.*)` rewrite in `vercel.json` — not Render. Render is irrelevant here and remains billing-suspended.
- The Vercel MCP connector returned **403 Forbidden** when listing deployments; the `npx vercel` CLI (already logged in) worked and is the reliable path.
- Caution for future checks: a `curl | grep "is it live?"` test can pass against a build that *already* contained the string. Grep for something that is genuinely new (e.g. `phone-holder`, `fitPhone`) before calling a deploy verified.

Verified live

- ✓ `hub.shift-group.co/accounting` — Odoo tile present (`shift2.odoo.com` in the served HTML).
- ✓ `hub.shift-group.co/accounting/budget` — new `phone-holder` markup and `fitPhone` both served.

State at close

- Working tree clean, `main` level with `origin/main`, production matches the repo. **Nothing pending on this thread.**
- Files touched: `accounting-home.html` (tile list + `ext` flag), `budget.html` (ledger add-links, account default, search focus, phone preview).

If picked up later

- The alternative that was declined remains open: a real `/accounting/odoo` page inside the hub, in the Shift Hub look, reading bills / payments / journals through the Odoo JSON-RPC connector. That needs a decision on which views are worth having before any code.
- Older open items on this app are unchanged and tracked elsewhere: Wise API token + public key upload, "Record in Odoo" phase 2 on the Whish page.
